General Information

Welcome
Thank you for purchasing ZTE-J G830 GoTa digital trunking phone. To guarantee the mobile phone always in its best condition, please read this manual carefully and keep it for further use.

Security
To protect your mobile phone from illegal use, take the security measures as follows:
- Set PIN codes of the UIM card.
- Set handset lock code.

Safety Precautions
This section includes some important information on safe and efficient operation. Please read this information before using the phone.

SAR (Specific Absorption Rate)
The exposure guidelines for mobile devices employ a unit of measurement known as the Specific Absorption Rate (SAR). The SAR limit stated in the international guidelines is 2.0 watts/kilogram (W/kg) averaged over ten grams of tissue. Tests for SAR are conducted using standard operating positions with the device transmitting at its highest certified power level in all tested frequency bands. The actual SAR level of an operating device can be well below the maximum value because the device is designed to use only the power required to reach the network. That amount changes depending on a number of factors such as how close you are to a network base station.
The highest SAR value when tested according to international testing procedures recommended by International Guidelines for Exposure to Radio Waves (ICNIRP) for use is 2.00 W/kg.

SAR values may vary depending on national reporting and testing requirements and the network band. Use of device accessories and enhancements may result in different SAR values.

**Note:** The SAR limit of 2W/kg averaged over ten grams of tissue is the permitted level of RF energy for the general population. The standards and guidelines include a substantial safety margin designed to assure the safety of the public, regardless of age and health and to account for any variations in measurements.

**Operational Precautions**

- Please use your phone properly. When making or answering a call, please hold your phone as holding a wire line telephone. Make sure that the phone is at least one inch (two point five centimeters) from your body when transmitting.

- Do not touch the antenna area when the phone is in use. Touching the antenna area affects call quality and may cause the phone to operate at a higher power level than needed (note: the antenna area of this mobile phone is near the upper part).

- Some people may be susceptible to epileptic seizures or blackouts when exposed to flashing lights, such as when watching television or playing video games. If you have experienced seizures or blackouts, or if you have a family history of such occurrences, please consult your doctor before playing video games on your phone or enabling a flashing-light feature on your phone. (The flashing-light feature is not available on all products.)

- Keep the phone out of the reach of small children. The phone may cause injury if used as a toy.

**Precautions While Driving**

- Please pay attention to the traffic safety. Check the laws and regulations on the use of your phone in the area where you drive. Always obey them.
• Use hands-free function of the phone, if available.
• Pull off the road and park before making or answering a call if conditions require.

Precautions for Medical Devices and Facilities
• When using your phone near pacemakers, please always keep the phone more than eight inches (twenty centimeters) from the pacemaker when the phone is switched on. Do not carry the phone in the breast pocket. Use the ear opposite the pacemaker to minimize the potential for interference. Switch off the phone immediately if necessary.
• Some phones may interfere with some hearing aids. In the event of such interference, you may consult your hearing aids manufacturer to discuss alternatives.
• If you use any other personal medical device, please consult the manufacturer of your device to determine if it is adequately shielded from RF energy.
• In those facilities with special demand, such as hospital or health care facilities, please pay attention to the restriction on the use of mobile phone. Switch off your phone if required.

Mobile Phone
• Please use original accessories or accessories approved by the phone manufacturer. Using any unauthorized accessories may affect your mobile phone’s performance, damage your phone or even cause danger to your body and violate related local regulations about telecom terminals.
• Turn off your phone before you clean it. Use a damp or anti-static cloth to clean the phone. Do not use a dry cloth or electrostatically charged cloth. Do not use chemical or abrasive cleaners as these could damage the phone.
• As your mobile phone can produce electromagnetic field, do not place it near magnetic items such as computer disks.
• Using the phone near electrical appliances such as TV, telephone, radio and personal computer can cause interference.
• Do not expose your mobile phone to direct sunlight or store it in hot areas. High temperatures can shorten the life of electronic devices.
• Keep your phone dry. Any liquid may damage your phone.
• Do not drop, knock or harshly treat the phone. Rough handling can break internal circuit boards.
• Do not connect the phone with any incompatible enhancement.
• Do not attempt to disassemble the mobile phone or battery.
• Do not store the phone with flammable or explosive articles.
• Do not charge the mobile phone without battery.

Loud Noise
This phone is capable of producing loud noise which may damage your hearing. Turn down the volume before using earphones or other audio devices.

Precautions for Potentially Explosive Atmospheres
• Switch off your phone prior to entering any area with potentially explosive atmospheres, such as fueling areas, fuel or chemical transfer or storage facilities.
• Do not remove, install, or charge batteries in such areas. Spark in a potentially explosive atmosphere can cause an explosion or fire resulting in bodily injury or even death.
• To avoid possible interference with blasting operations, switch off your phone when you are near electrical blasting caps, in a blasting area, or in areas posted “Turn off electronic devices”. Obey all signs and instructions.
Precautions for Electronic Devices

- Some electronic devices are susceptible to electromagnetic interference sent by mobile phone if inadequately shielded, such as electronic system of vehicles. Please consult the manufacturer of the device before using the phone if necessary.

Safety and General Use in Vehicles

- Safety airbag, brake, speed control system and oil eject system shouldn’t be affected by wireless transmission. If you do meet problems above, please contact your automobile provider. Do not place your phone in the area over an airbag or in the airbag deployment area. Airbags inflate with great force. If a phone is placed in the airbag deployment area and the airbag inflates, the phone may be propelled with great force and cause serious injury to occupants of the vehicle.
- Please turn off your mobile phone at a refueling point, and the same to the place where the use of two-way radio is prohibited.

Aircraft Safety

- Please turn off your mobile phone before the airplane takes off. In order to protect airplane’s communication system from interference, it is forbidden to use mobile phone in flight. Safety regulations require you to have permission from a crew member to use your phone while the plane is on the ground.
- If the mobile phone has the function of automatic timing power-on, please check your alarm setting to make sure that your phone will not be automatically turned on during flight.

Battery Use

- Do not short-circuit the battery, as this can cause the unit to overheat or ignite.
- Do not store battery in hot areas or throw it into fire. Otherwise, it will cause explosion.
• Do not disassemble or refit the battery. Otherwise, it will cause liquid leakage, overheating, explosion and ignition of the battery.

• Please store the battery in a cool dry place if you don’t use it for a long period.

• The battery can be recharged for hundreds of times, but it will eventually wear out. When the operating time (talk time and standby time) is noticeably shorter than normal, it is time to replace it with a new one.

• Please stop using the charger and battery when they are damaged or show evidence of aging.

• Return the worn-out battery to the provider or dispose of it in accordance with environment regulations. Do not dispose of it in household rubbish.

• Only use the original batteries. Using any unauthorized battery may affect your handset performance or may cause danger of explosion, etc.

• **Warning:** If the battery is damaged, do not discharge it. If the leakage does come into contact with the eyes or skin, wash thoroughly in clean water and consult a doctor.

---

**Limitation of Liability**

ZTE shall not be liable for any loss of profits or indirect, special, incidental or consequential damages resulting from or arising out of or in connection with using this product, whether or not ZTE had been advised, knew or should have known the possibility of such damages. The user should refer to the enclosed warranty card for full warranty and service information.

**Note:** The pictures and icons shown in the manual are just schematic drawings for function demonstration. If they are inconsistent with your handset, please take your handset as the standard. If the inconsistency exits in the manual because of the handset function updating, please refer to the follow-up public information from ZTE CORPORATION.
## Getting Started

### Inside the Box

You should find the following items inside the box:

<table>
<thead>
<tr>
<th>SN</th>
<th>Item</th>
<th>Quantity</th>

</tr>
<tr>
<td>* Key</td>
<td>• Used to input *.</td>
</tr>
<tr>
<td></td>
<td>• Used to open symbol list in text entering mode.</td>
</tr>
</tbody>
</table>
## Key Function

- **Hold it to lock keypad in standby mode.**
- **Select Unlock and press the * Key to unlock keypad.**

### # Key

- **Used to input #.**
- **Used to switch text entering modes in text entering mode.**
- **Hold it to activate or deactivate vibration mode in standby mode.**

### Volume Up Key

- Turn up the volume in standby mode.

### Volume Down Key

- Turn down the volume in standby mode.

### PTT Key

- Hold it to make a PTT call and release it to listen to others.

### GPS Key

- Hold it to access to GPS information interface.

### Emergency Call Key

- Hold it to make emergency call.

**Note:** In this User Manual, “press a key” means to press the key and release it, while “hold a key” means to press the key for at least two seconds and then release it.

**Install/Remove**
Install the Battery

Note:

- The Lithium battery of mobile phone can be immediately used after unpacking.
- Make sure your mobile phone is powered off and the charger is disconnected from the phone.

1. Insert the battery by aligning the battery’s gold contacts with the battery connectors at the top part of battery compartment;
2. Push down the battery until it clicks into place.

Remove the Battery

1. Make sure that your mobile phone is powered off;
2. Remove the battery cover;
3. Pull the battery up and remove it from the battery compartment.
Insert the UIM Card

Note:
- Contact your network service provider to check whether your mobile phone support UIM card.
- Make sure your mobile phone is powered off and the charger is disconnected from the phone.

1. Remove the battery if it is installed;
2. Locate the UIM card slot, then insert the UIM card with its gold contacts facing down and its cut-off corner facing out the card slot;
3. Slide the UIM card completely into the slot.

Insert the T-flash Card

1. Remove the battery if it is installed;
2. Push the T-flash card slot upwards and lift it;
3. Insert the T-flash card into the slot with its gold contacts facing down;
4. Put the card slot down and push it downwards to lock.
Charge the Battery

Your phone is powered by a rechargeable battery. The battery is not fully charged when you purchase your phone, but there may be enough power in the battery to power the phone on. For maximum battery performance, it is recommended that you charge the battery for eight hours for the first three times. A new battery’s full performance is achieved only after three complete charging and discharging cycles.

Warning:

- Put the phone at a ventilated place with temperature between 0°C and + 45°C. Use only the supplied or approved chargers. Using unauthorized charger may cause danger and violate the authorization and warranty rules of the phone.
- Charge the battery in time when your phone automatically powers off or displays a warning “Battery low”.
- Do not charge the battery more than 24 hours continuously.
• The talk time and standby time of the phone lie on ideal working environments. In practice, the battery working time varies with different network conditions, working environments and modes.

1. Insert the battery into battery compartment of charger. Or insert the mobile phone into mobile phone compartment of charger.
2. Connect the AC adapter and charger with mini 5pin data cable;
3. Plug in the AC adapter to an electrical outlet to start charging the battery.
   Indicator light is red, it indicates it is charging. Indicator light is green, it indicates it is fully charged.
Power Your Phone On/Off

- Hold the **End Key** to power on the phone.

  The mobile phone will automatically test whether the UIM card is plugged in and valid after powering on, then the following messages will be displayed on the screen sequentially:
  
  - **Enter phone password:** if a phone password has been set.
  - **Enter PIN:** if a UIM card password has been set.
  - **Searching:** search for network.

- Hold the **End Key** to power off the phone.

Unlock UIM Card and Phone

PIN code and phone password could prevent your UIM card and mobile phone from illegal use.

Unlock UIM Card

Enter PIN code and select **OK**. Three consecutive incorrect PIN code entries will lock the UIM card. Then, the PUK code is needed to unlock the UIM card. Enter correct PUK code, and then enter PIN code.

**Note:** The PIN code may be provided to you with the UIM card. If not, contact your network service provider. According to your requirement, please change it to your own code.

Unlock Phone

Enter the phone password and select **OK**.

**Note:** You must remember your own phone password; otherwise some service expense may happen. For PIN code and phone password, refer to **Security Settings** for detail.
**Lock/Unlock Keypad**

You can lock your phone’s keypad to avoid misoperation when putting your phone in bag.

- Hold the * Key to lock the keypad.
- Select **Unlock** and press the * Key to unlock the keypad.

**Connecting to Network**

The mobile phone will search the network automatically after it is powered on. The logo of network service provider will be shown in the screen after successful network connection. Then you can use the phone to make and answer calls.
Ordinary Call

Ordinary call means the traditional CDMA voice phone call which you usually make.

Make Ordinary Calls

You could make ordinary calls by the following four means:

- Dial directly
- Dial via Contacts
- Dial via Call History
- Speed dial

Dial Directly

1. Enter the desired phone number in standby mode;
2. Press the Send Key to dial;
3. To end the call, press the End Key.

Dial via Contacts

1. Select Contacts in standby mode;
2. Press the Up / Down Keys to select your desired contact;
3. Press the Send Key to dial;
4. To end the call, press the End Key.

Dial via Call History

1. Press the Send Key to access to All Calls in standby mode;
2. Press the **Up / Down Keys** to select your desired contact or phone number;
3. Press the **Send Key** to dial;
4. To end the call, press the **End Key.**

### Speed Dial

1. In standby mode, select **Menu > Contacts > Speed Dials** and you can view the speed dial list;
2. Select a speed dial number which is **Not Set**, and then select **Edit**;
3. Enter your desired phone number, or press the **OK Key** to select your desired phone number from **Contacts**, and then select **Save** to save the speed dial setting;

   **Note:** If the contact has several phone numbers, press the **OK Key** to select your desired number, and then select **OK** and **Save** to save the speed dial setting.
4. To clear the setting, select **Delete**;
5. Hold the corresponding **1~9 Alpha Numeric Keys** to make speed dial in standby mode;
6. To end the call, press the **End Key.**

### Dial IP Call

1. Enter the desired phone number in standby mode;
2. Select **Option > IP Dial**, and the preset IP number will be added before the phone number;
3. To end the call, press the **End Key.**

### Set IP Number

In standby mode, select **Menu > Settings > Call Settings > IP Dial**, you can do the following operations:
- Select **Option > Edit** to edit the IP number, and then select **OK**;
• Select your desired IP number, and then select **Option > Set As Default** to set it as the default IP number;
• To delete IP number, select **Option > Delete**.

**Receive Ordinary Calls**

1. Press the **Send Key** to receive incoming call;
   
   **Note:** You can also receive calls by pressing other keys or earphone. Refer to **Call Settings** for details.

2. To end the call, press the **End Key**.

**Set Incoming Call Ringtone**

**Note:** Only the incoming call ringtone of the contacts saved in the phone can be set.

1. In standby mode, select **Contacts**;
2. Select your desired contact, and then select **Option > Edit**;
3. Press the **Up / Down Keys** to move the highlight to **Ring**, and then press the **OK Key**;
4. Select your desired ringtone from phone or T-flash card;
5. Select **OK** to save the setting.

**Set Incoming Call Image**

**Note:** Only the contacts saved in the phone can be set with image.

1. In standby mode, select **Contacts**;
2. Select your desired contact, and then select **Option > Edit**;
